

# TROJKA TOKEN

White Paper

# Introduction

---

Trojka is the first crypto to be released focussed on the Russian energy market. Trojka, mainly focussed on the nowadays gas and electricity market. Trojka will be the first-ever international cryptocurrency targeting this aspect.

Since Russia is the biggest supplier of gas & oil in the world and supplies the biggest part of Europe the dependence is huge. Trojka is here so individuals, as well as businesses, will be able to have an insight into the nowadays market value.

Because of the enormous following and interaction of our community, prices will go down drastically and intermediaries will be eliminated.

In the next decades, Russia will be working on climate change and a reduction of co2 emissions. The goal of most countries in the world is to lower all the co2 emissions, using a circular economic system raw materials can be used more efficiently; re-used, and with less to no hazardous substances.

When investing in TRK (Trojka) you will have a direct influence on the mission to a cleaner environment.

Because of this prices eventually won't be decided by the market suppliers anymore.

## What are Trojka's functionalities?

Trojka is built on the Ethereum blockchain. Created at the end of 2021 and adapted to the new normal of this world. Available for exchanging with multiple blockchains & one-click deployment of preset blockchain networks.

It is expected to allow near-instant transfers, exchange, and conversion of digital assets and cryptocurrencies in the future. The Ethereum development team has already built high-quality user experience Mobile/Web browser libraries that will enable businesses to create real-world end-user applications on a large scale.

## Where can I buy Trojka?

Trojka (TRK) can be bought via any exchange that offers our digital currency. Also, through a personal wallet that accepts ETH. Just simply search for Trojka or TRK, or copy our contract address to buy it manually.

Make sure you do the research needed before buying from any exchange!

You can store Trojka on the platforms you buy TRK off. When stored on an exchange the chosen exchange is responsible for the safety of your asset. If you would rather be responsible yourself please make sure to use a personal wallet.

## Token

Trojka token is built on the Ethereum network and directly linked to the Ethereum blockchain. The network solves this problem by using a high throughput blockchain with consensus provided by a selected set of Block Producers, chosen for every checkpoint by a set of Staker's. It then uses a Proof Of Stake layer to validate the blocks and publish periodic proofs (Merkle roots) of the blocks produced by the Block Producers to the Ethereum mainchain.

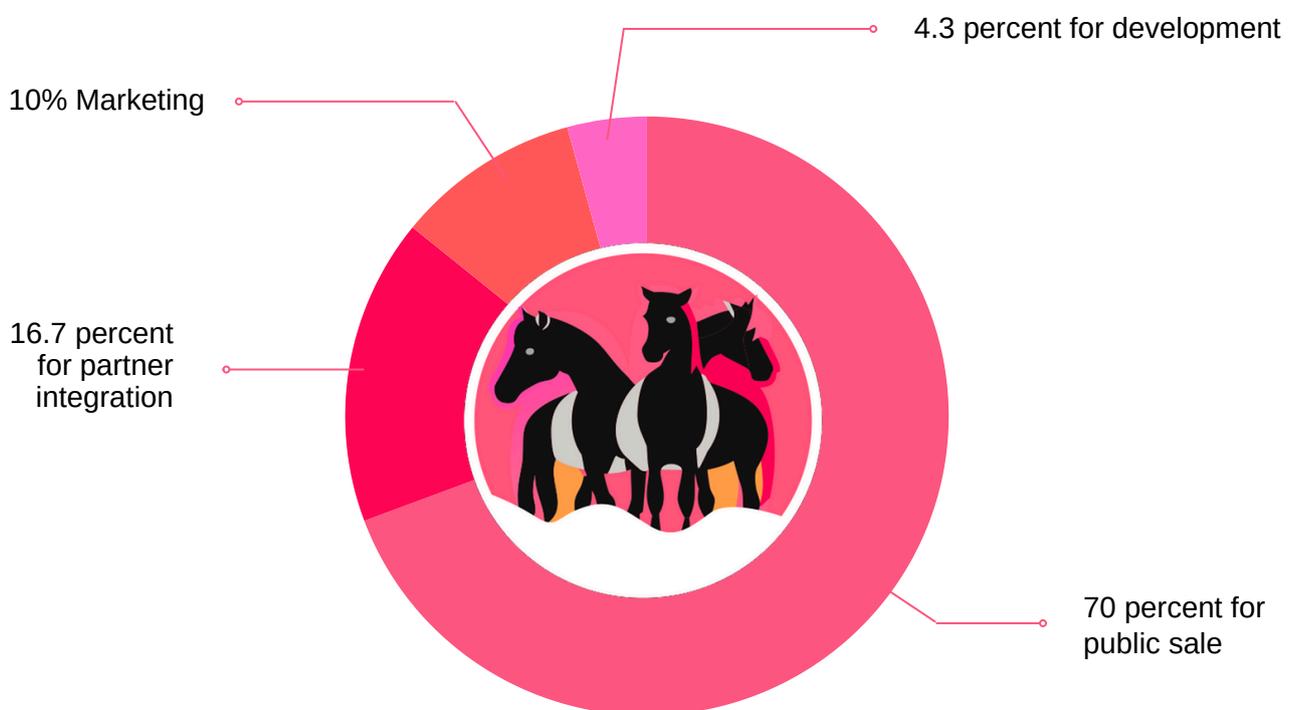

This helps achieve a high level of decentralization while maintaining swift (< 2 seconds) block confirmation times.

Holders of the coin will have the privilege of influencing decisions on the platform through a verifiable vote. The platform employs a 'proof of stake' system hence it is environmentally friendly.

# Tokenomics

Prior to launching, a total of 1.5 million tokens will be minted. 70 percent of these tokens will be available on the Pancakeswap for public sale. 10 percent will be assigned to marketing and listing initiatives, 4.3 percent will be reserved for development, and another 16.7 percent for partner integration. The remaining 10 percent will be shared between charity donation (5 percent) and team/advisors (5 percent). Tokens assigned to the founders and advisors will be locked for a given period to bar them from cashing them out and disappearing. This implies users' investments are secured from fraud.

# ROADMAP

## PHASE 01

- Website launch
- Whitepaper publicly available
- Start pre-sale initial Market Cap & our liquidity pool.
- Launch on PancakeSwap

## PHASE 03

- Smart marketing campaign
- World wide advertisement
- Fundraising for the project
- NFT additions

## WHAT'S NEXT?

- TRK will introduce the market with new updates, price points and goals. We work hard on a bright future.

## PHASE 02

- Setting up Airdrops
- Coin Market Cap listing
- Alternative exchange releases
- Initial marketing
- Token info and logo on Polygon Scan

## PHASE 04

- Public release on iOS and Android
- Making deals with several companies, banks and leaders to enable Trojka Coin throughout the whole of the world.
- Creating a strong network and stabilize the energy market price

# Conclusion

---

The cryptocurrency industry is growing at a blistering pace. However, experts are warning that this growth is not sustainable due to various weaknesses in cryptocurrency platforms. Trojka token intends to mitigate these issues by providing a cryptocurrency platform that is immune to challenges facing contemporary platforms. Trojka token is an ultramodern platform designed for modern crypto enthusiasts like you and me. Try Trojka and see it yourself. Visit our website: <https://www.trojkatoken.com> and experience a new crypto trading experience.
